Abstract

***Chalcopteryx machadoi* n. sp. from northern Brasil (Zygoptera, Polythoridae).** A new species, is described and illustrated from a single male collected in the state of Pará, Brazil (holotype ♂: Santo Antonio do Tauá, 8.I.1999) and deposited in the Museu Nacional, Rio de Janeiro, Brazil. This species can be distinguished from others by the color pattern of the wings. In *Chalcopteryx machadoi* sp. n. the four wings are hyaline. An identification key is provided for the species of the genus.

Key words: *Chalcopteryx*, Polythoridae, Odonata, Brazil, Neotropical taxonomy.
